What we wanted to build

Our vision was simple:

- Turn watching football games into a full-blown strategy game fans can play
- Make sure playing this game does not distract fans from the actual match (i.e. make sure it's something they can casually do at the same time as watching the game)
- Make it fun

What went wrong and how we fixed it

As all other apps in this world, something had to break down

- Events were firing out of order. The first prototype used plain EventBridge with no ordering mechanism, and that would have completely ruined the real-time experience for fans.
- In order to fix it, AWS EventBridge was integrated with an AWS SQS FIFO queue on top, so that they always come in order, and on time, guaranteeing consistency in timings.
- Other small things broke along the way, we pushed through and solved them one at a time.

Built for the cloud

- The whole app is cloud-native. Everything is continuously deployed to AWS when pushing code.
- BundesligaBrezn leverages a fully serverless deployment, as such:
 - DynamoDB as the database tier
 - Lambda as the compute layer, frontend by API Gateway
 - S3 + CloudFront as the front-end layer
 - EventBridge for scheduling and firing real-time events
 - SQS FIFO for ordering those events
 - CloudFormation is used on everything that is deployed in AWS. Nothing was deployed manually.
 - Bedrock for AI commentaries and half-time quiz
 - Cognito for authentication
- Fully serverless – built to scale the moment the whistle blows

End result

A fully working, live-deployable second-screen football game. Draft your squad, earn points, compete in real-time mini-games, earn badges, and watch the match unfold together.

- Live squad draft with tiebreak fairness system. Draft players from either team of the match you're watching live on TV and score points instantly when they perform in real life (goals, assists, saves).
 - 3 real-time mini-games (offside reflex, penalty, halftime quiz) triggered by actual match events
 - AI match director via Amazon Bedrock providing live commentary
 - 31 badges, brezn credit economy, in-match chat — full engagement loop
- Playable right now at d1t5xvsturq92p.cloudfront.net.
